

Here are some ways the two groups are different.

In Group 1, all sides are the same length, but in Group 2, all of the sides are not the same length.

In Group 1, both pairs of opposite sides are parallel. In Group 2, only 1 pair of opposite sides are parallel.

Here are some ways the two groups are alike.

All the polygons have 4 sides and 4 vertices.

All of the polygons in both groups are part of a larger group, quadrilaterals.
